Vulnerabilities

APPROACH

TIA is based on REMOTE TESTS to detect the weaknesses and vulnerabilities that the implemented teleworking infrastructure may have.

1. DISCOVERY: Analysis of the profile of the exposed architecture.

2. VULNERABILITY ANALYSIS: Search for vulnerabilities in order to detect existing weaknesses in the detected computers.

3. EXPLOITATION: Application of intrusive techniques in order to take advantage of the weaknesses found, in cases where exploitation does not pose a risk to the integrity of the services.

4. REPORTING: Generation of results report with the recommendations and actions that should be applied with the aim of improving the security of the Company's technology environment.
